

Client Meeting Summary – Sep 18th, 2020

Attendees:

Ollie Allan
Lin Mi
Tingli Qiu
Spoorthi Suresh Avvanna
Chitra Naga Durga Sindhusa Veluguleti
Yuhan Zhao

Key Points Discussed:

- The client is hoping to extract more data Ftp/bike, and among the two approaches suggested by the team, he picked the second approach and requested the team to document everything, so this will be a foundation for the coming to teams
- The client also suggested that if we don't have enough data for swimming, the team should document the approach for future implementations.
- The team will use sec per 100 meters instead of sec per meter on CSS
- We might have incorrect data; data in the CSV file might not match certain activity types.
- it does not matter if we were using 400,50 or 400,200 meters
- The team should only build the model on activity type: running
- The team should finish the base model implementation by Tuesday
- Task Split
 - SVM-Spoorthi
 - XGboost – Sindhu
 - Random forest- Lin
 - Ada boost - Yuhan
 - Neural nets-Fred(already implemented)
- Meeting with Milad on Friday
